

MicroBoost™ nutrient package helps to remediate soils contaminated by the hydrocarbons from oil mud, oil spills or leaks. This specialized product contains a concentrated and stabilized nutrient package that promotes and accelerates reproduction and growth of microorganisms present in the soil or water. *MicroBoost™* supplies the nutrient required assists these microorganisms in rapidly breaking down hydrocarbon contaminants for a more efficient and economical bioremediation process. *MicroBoost™* can be added to contaminated soil or water.

The amount of Micro Boost™ required can be estimated using the following:

(%TPH) X (157 gal Micro Boost™ per acre foot)

(%TPH) X (.1 gal. Micro Boost™ per cubic yard)

For example : 10,000 feet of 7 5/8” hole would yield about 293 yd.³

$(75/8)^2 / (1029)X(10,000)X(.52) = \underline{293}$ yd.³ of cuttings

with 15% TPH {% oil in the cuttings}

$(15) X (.1)X(293) = \underline{439}$ gal. of Micro Boost™
